

Abstract

A bracket attached to a peripheral device of a computer system aligns and attaches the peripheral device to the inside of a computer system chassis. The bracket is detachably mountable and includes a bracket body having an aperture therein through which the peripheral device is inserted. The bracket includes a support bar having a tab that fits into a slot in the chassis to securely hold the peripheral device in position such that the front panel of the peripheral device is aligned within an aperture in a face of the chassis.
